Overall: Records Management Initiative

Records Governance Framework — Compliance / Risk Reduction / Cost Optimization / Global Governance

WHY

Background & Challenges

The organization has shifted from paper documents to primarily electronic documents, but the mechanisms, roles, and responsibilities for electronic records management have not been defined.

The document management regulations established 10 years ago cannot accommodate digitization or regulatory updates, and a PDCA (Plan-Do-Check-Act) cycle has not been established.

More than 70% of revenue depends on overseas operations, yet governance rules centered on Japan are not aligned with a global operating structure.

Excessive document retention has increased costs and created e-discovery risks in litigation (higher search costs and reduced reliability of evidence).

WHAT

Solution & Maturity Model

5-stage maturity model (ISO 30301 PDCA):

Lv1 Unmanaged / Ad hoc: records are scattered and duplicated.

Lv2 Initial: Basic rules and retention/storage methods are established.

Lv3 Defined: Processes are standardized and applied organization-wide (including global)

Lv4 Managed: KPI-based management and integrated system operations.

Lv5 Optimizing: Continuous improvement and innovation through automation

Stakeholder Model

RMO as global hub coordinating:
Quality / BUs / Legal / Compliance

Benefits: Compliance, audit efficiency, risk reduction, cost savings, evidence reliability, global governance

HOW

#1 Maturity Assessment

Score the current state against assessment criteria, visualize results in a dashboard, and improve maturity through governance and process definition.

#2 Records Management System

Extend SharePoint Online to manage paper and electronic records across their lifecycle, including automated disposition, roles (RACI), and access controls.

#3 Policy & Responsibility

Develop a global-ready governance and records management policy framework, defining retention rules, disposal criteria, and role responsibilities.

2026 Annual Goals

- five-company joint discussions.
- Clarification of roles and responsibilities and organization-wide communication
- Identification of undefined or undocumented records.
- Launch of a new PDCA cycle.

Records Management Maturity Model

1 | What is the Maturity Model?

Lv1	Unmanaged (Unmanaged)	Ad-hoc management. Documents are scattered and duplicated, making search and tracking difficult
Lv2	Initial (Initial)	Basic rules and storage methods (folder structure, naming conventions) are established
Lv3	Defined (Defined)	Processes are standardized and applied cross-organizationally, including globally
Lv4	Managed (Managed)	KPI-based management. DMS/ECM systems are integrated and operational
Lv5	Optimizing (Optimizing)	Proactive management leveraging continuous improvement, automation, and AI

当面の目標はLv3到達（プロセスの標準化とグローバル適用）。Lv4以降は中長期フェーズで検討。

2 | Five Evaluation Dimensions

A maturity assessment is conducted for each of the following five dimensions.Rather than a single score, understanding the current state for each dimension helps clarify where priority issues lie.

① Policy & Regulations	Definition of document lifecycle, retention/disposal criteria, and status of RACI matrix establishment
② System	Implementation and utilization of DMS/ECM (e.g., SharePoint Online), searchability, and access control
③ Process	Actual operational status of version control, approval workflows, and archive/disposal rules
④ People & Culture	Status of training and education, compliance awareness, and effectiveness on the ground
⑤ Monitoring & Improvement	KPI setting and measurement status, audit cycle, and corrective/preventive action operations

Records Management Maturity Model

Evaluation Dimension	Lv1: Unmanaged (Unmanaged)	Lv2: Initial (Initial)	Lv3: Defined (Defined) Target	Lv4: Managed (Managed)	Lv5: Optimizing (Optimizing)
① Policy	No policy Not updatedfor years	Retention/disposal rules at select sites	Global policy compliance RACI-based accountability	Periodic review Annual approval established	Dynamic updates per regulatory changes; auto-notifications
② System	Shared folders and email-centric	Basic SharePoint operation (partial)	Status management and cross-border support	ERP integration and advanced access control	AI search and auto-classification in use
③ Process	Manual version control No disposal criteria	Basic approval flow Paper and digital mixed	Full document lifecycle implementation (capture~disposal)	Automated workflows and deadline alerts	ML-based predictive disposal and archiving
④ People & Culture	Left to individuals Frequent rule violations	Onboarding training only Japan-centric	Company-wide e-learning Global training in place	Annual awareness survey Compliance rate 90%+	Bottom-up improvement proposals flourishing
⑤ Monitoring	No audits Unable to grasp status	Annual internal audit only Many findings	Monthly KPI dashboard First PDCA cycle initiated	Real-time monitoring Zero audit findings	AI anomaly detection for proactive improvement

Evaluation Approach: インタビュー、システムログ、ドキュメントレビューを組み合わせ、担当者の主観を排除した「証拠に基づく客観的スコアリング」を実施します。

Roadmap (Phase I): Current State Assessment to the Improvement Activities

1

Global Governance

Building a New Framework and Reaching Consensus

Conduct a review of the records management framework through 5-company discussions, clarify roles and responsibilities (RACI matrix) from a global-first perspective, and communicate these to all stakeholders.

2

Maturity Assessment

Current State Assessment Using a Common Standard

Score the current state across 3 regions using objective evidence such as interviews and system logs across 5 dimensions, and visualize the results in a dashboard.

3

System Foundation

Strengthening the Foundation of the Records Management System

Through SharePoint Online enhancements and other means, build a technical foundation that securely and efficiently supports the full document lifecycle (capture → retention → disposal).

4

Action Planning

Prioritization and Planning of Improvement Activities

Based on assessment results, identify issues to be addressed globally at once versus region-specific issues, and develop concrete improvement action plans.
